

Chapter 6 - Chemical Safety - NRC Questions on NEI Comments

General Comments

1. NEI noted that there are confusing and inconsistent references to the ISA and ISA Summary. NRC acknowledges the inconsistencies and will resolve them.
2. NEI appears to base the chemical safety review entirely on the ISA Summary. The ISA Summary would be part of the material reviewed by an NRC safety reviewer but is not the only document to consider for review.

Specific Comments

6.5.2.2 Items Relied on for Safety

1. NEI Comment - Second Paragraph:
The following sentences introduce material that is far too detailed for inclusion in a "Summary" section of the SRP. This guidance has been relocated 6.4.3.2.

NRC Question

Why does NEI feel that the information is too detailed? This statement only provides examples for the reviewer to consider

2. NEI Comment - Third Paragraph
The following sentence is poorly written. As this paragraph adds nothing to the chemical safety evaluation, it should be deleted.

NRC Question

Why does NEI feel that a statement that reminds reviewers to check for administrative controls for higher risk accident sequences should be deleted?
