Dear NRCers

As a concerned citizen, I must voice my opposition to the outrageous proposal to use radioactive soils in areas accessible to the public; i.e. gardens, golf courses, farms. Do you really think we need to have a higher degree of radiation in the food chain or in public parks? There is already a large amount of dangerous material lurking within our soil due to pesticide and waste contamination. The soil is also the filtration system for our aquifers.

We do not need to add to the already abundant pollution of our planet. We need to put the brilliant, creative minds of this country together creating ways of ridding ourselves of pollutants, not ways to better distribute them.
