I am absolutely opposed to this insane and dangerous idea to use radio-active soils ANYWHERE!! Go and visit people who suffer with Multiple chemical Sensitivities, Cancer, and auto-immune diseases, and ask yourselves if you would like to see your grandchildren suffering like that. There is only so much the human body, the atmosphere, the planet can take. How can we be healthy on a sick planet with radioactive soil in the backyard, or any yard. Please don't do this. How much do we spend on Health Care?? How will spreading poison improve anything? Think about it.
