Docket No.: 05000443

License No.: NPF-86

SUBJECT: SEABROOK STATION "B" EMERGENCY DIESEL GENERATOR DAMAGE DURING TESTING - UPDATE

Seabrook Station is currently in a refueling outage with all fuel in the reactor vessel and the licensee is working towards restoration of the reactor coolant system.

On December 3, the licensee stopped a 6 hour break-in run of the 'B' emergency diesel generator about 25 minutes into a post maintenance test run due to an increase in lube oil strainer differential pressure. Preliminary visual inspections indicate that damage had occurred to the No. 5 main bearing.

A full overhaul of both the 'A' and 'B' EDGs had occurred during the current refueling outage after the 'B' EDG failed during a 24 hour surveillance test on November 1. All the main bearings on the 'B' EDG were replaced during the overhaul. The 'A' EDG had been successfully restored to service on November 28.

The licensee has initiated an 'event team' to investigate this most recent failure of the 'B' EDG.

An NRC special inspection team is continuing to evaluate the licensee response to the EDG failures.

The States of New Hampshire and Massachusetts have been notified of this event.

Region I Public Affairs is prepared to respond to media inquiries.

The information presented herein has been discussed with the licensee, and is current as of December 4, 2000.
