Subject: TSTF-360 Correction Pages

Dan,

I know that Don is out of town and I wanted to get some information about the TSTF-360 corrections that I received. I have reviewed the package and only have two comments. The first is that, under item #5 (All OGS LCO 3.8.5 markup, Condition B), the correction was not made exactly as I had stated. I had asked that the words " or more required" be deleted from the Condition statement so that it reads, "One DC electrical power subsystem inoperable . . ." to be consistent with the earlier versions and the clean copy. However, in all of the markups the word "required" was left in the Condition. Was this deliberate and , if so, why was it left in? The clean version does not have the word "required" in it.

The second comment is that, for item #8, the BWR/4 corrected markup was missing altogether.

If these two items can be corrected, I think we can go forward and approve TSTF-360. Let me know what you think.

Nan
