Subject: Fwd: Revised pages for MY-UMS SAR

Team:

Please see your in-box and the attached. NAC inadvertently submitted some changes to Chapter 9 in the RAI responses, and then decided not to ask for that.

All you need to do is insert the two pages in the Feb 7 letter into the list of effective pages.

What NAC pulled back (in other words, they are saving it for later), was removal of the daily visual inspection of the cask inlets and outlets (deletion of section 9.2.3, item #1), and substituting TS 3.1.6 for that (essentially, they would only be required to monitor temperatures and act on that as an indicator). They also were planning on deleting the "thermal test for the first system placed in use", currently in 9.2.4.
