Nuclear Regulatory Commission  
Public Relations Department  
Washington, DC 20444

I am writing to protest a move by the Nuclear Regulatory Commission to legalize the release of radioactive materials from licensed, regulatory control into raw materials, building supplies and items with which we come into contact daily. How could anything be more dangerous and shortsighted than that? The whole idea is INSANE!!! This action would subject our children and grandchildren to unknown but increasing amounts of low-level radiation over their whole lifetimes, and once the process is started there will be no way to recover the radioactive materials from the environment.

Please convey these sentiments to the appropriate decision makers.

Sincerely yours,

Martha Ferger
