To [tjn@nrc.gov](mailto:tjn@nrc.gov) and all Concerned Citizens,

I have just today seen the information that NRC (Nuclear Regulatory Commission), official public protector from radioactive contaminations, is considering the sale of (probably "slightly" or "decontaminated") contaminated soil for "realistic reuse scenarios" such as (!), golf courses, home landscaping, athletic fields, playgrounds, farms, paving mix, adobe brick, ash, among others. The "independently researched" literature findings and team will also determine "environmentally acceptable endpoints" and "implications for exposure assessment, methodology to estimate the amount and particle size of soil ingested by children".

What part of NO SAFE RADIOACTIVE EXPOSURE do you/they not understand?

What part of controversial findings and Precautionary Principle do you/they not understand? See Mangan's current study on decreased infant mortality on closing of 5 nuclear facilities, and additional decrease by 54.1% at Michigan's Big Rock Point Nuclear Plant. See Bertell's recalculation, based on less restrictive definitions, of nuclear victims totaling 3.1 Billion to date.

What part of a nuclear technology that is both immature and obsolete, a wrong turn, do you/they not understand?

What part of anguished public concern and common sense do you/they not understand?

What part of STOP IRRETRIEVABLE DUMPING/"DISPOSING" HAZARDOUS WASTES ON WE, THE PEOPLE do you/they not understand?

Please accept this public comment, though a few hours past deadline, but hours before Monday morning office openings, and forevermore pertinent. Please inform.

Thank you.
