on the D. C. Cook Nuclear Plant

DATES: January 4, 2001

ATTENDEES:

S. Bajwa
C. Craig
G. Grant
A. Vogel
J. Stang

K. Walton
J. Maynen
K. Coyne

Discussion Topics:

1. *Plant Status and Inspector Insights*

The resident inspectors provided a summary of plant activities. Both units continued to operate at full power with no significant equipment problems.

The inspectors discussed issues that were presented to the licensee during the most recent exit meeting.

2. *Discuss Revision of 0350 Charter*

The Panel reviewed and discussed proposed changes to the Charter. Minor changes were proposed and incorporated to reflect completion of Unit 1 restart related activities and focus on assessing dual Unit operation.

3. *Topics and Date of next 0350 Public Meeting.*

The next public meeting was proposed to be in mid- February, 2001. Topics of discussion proposed were: licensee status of containment structure analysis, reduction of corrective action backlog, engineering quality issues, licensing actions related to next refueling outages, and operational performance.

4. *Other*

The licensee completed its actions in response to Generic Letter 89-10, "Safety-Related Motor-Operated Valve Testing And Surveillance", as documented in a letter from the licensee dated December 15, 2000. The NRC will review the licensee's motor operated valve program in a future inspection activity.
