Subject: Additional Comments

Hello Mr. Bhachu,

   In our original application. It stated that during cobbling, the
gauge would receive slight to medium vibration. This statement is
founded in empirical experience with hundreds of gauges of this type
installed around the world. This is not a new product. this two rail
C-frame design has been used in both our isotope and x-ray gauges for
more than twenty years. The x-ray equipment using this type of two rail
system is considerable more sensitive to shock and vibration than our
isotope components. There is never been an incident were the shock and
vibration has effected the radiation integrity of our equipment.

We are very anxious and concerned about procuring the device
registration, I will be available by phone, fax or e-mail to answer any
and all questions and concerns that you have.

Frank Festa
