RE: North Anna Power Station - VPDES Permit - 126 Priority Pollutants

Dear Mr. Pandey:

Part I, Section E.9. of the recently reissued VPDES permit for North Anna Power Station allows the submittal of engineering calculations which demonstrate that the 126 priority pollutants are not detectable in outfall 105 as a substitute for monitoring. After reviewing the Material Safety Data Sheets (MSDS) for the chemicals added to the Bearing Cooling system, outfall 105, station personnel have determined that none of the 126 priority pollutants are in any of the chemicals used in the system.

We believe the information provided satisfies Part I, Section E.9. of the VPDES permit. Therefore, we are not proposing to sample outfall 105 for the 126 priority pollutants.

If you have any questions or desire additional information, please call Ron Birkhead at (804) 273-2992.

Sincerely,

Pamela F. Faggert
