**SECTION 3
FITNESS FOR DUTY PROGRAM
PERFORMANCE DATA**

- 1) The Fermi 2 annual testing rate in the Random Test Program for 2000 was 58 percent (average pool size was 1684, total tested was 973). All individuals reporting to the Fermi Energy Center are in the random testing program.
- 2) Detroit Edison does not have an on-site testing facility but transports specimens to a laboratory certified by the Department of Health and Human Services.

REPORTS MADE UNDER 10CFR26.73

There were no reports made under 10CFR26.73.

TESTING RESULTS

There were eight individuals who tested positive, two of which tested positive twice for a total of 10 positive tests for the six-month period ending December 31, 2000. The positive tests were categorized as follows:

Pre-Access Testing

There were four positive tests in this category. Two contract employees tested positive for cocaine and two contract employees provided cold specimens. The individuals were denied access.

For-Cause Testing

There were three positive tests in this category.

A contract employee was inprocessing and initially provided a cold specimen (See Pre-Access Testing section). A for-cause test was conducted and the individual tested positive for marijuana. The individual was denied access.

The second for-cause positive test was conducted on a contract employee when a security investigator detected the odor of alcohol on the individual during a background investigation interview. The individual was applying for unescorted access and did not have unescorted access at the time of the for-cause test. The individual was denied access.

In the third case, a contract employee had provided a cold specimen during a random drug/alcohol test. The employee was requested to submit to a for-cause test and the employee refused to test. The individual had not been granted unescorted access at the time of the random or for-cause test. The individual was denied access.

Random Testing

There were three positive tests in this category.

One contract employee provided a cold specimen (See For-Cause Testing section). One licensee employee tested positive for alcohol and one contract employee tested positive for marijuana. A review of the work activities for each individual was performed and no deficient work practices which could impact safety-related equipment/systems were identified. Unescorted access was suspended for both individuals.

Follow-Up Testing

There were no positive tests in this category during this six-month period.

SUMMARY OF MANAGEMENT ACTIONS

There was one appeal received during this six-month period. The appeal was reviewed by the appropriate levels of management and upheld as originally ruled.

There was one Condition Assessment Resolution Document (CARD) written identifying deficiencies in the Fitness For Duty Program during this six-month period. CARD 00-19496 identified one case where a cold urine specimen of insufficient quantity was mixed with an observed specimen. Inadequate work direction was identified as the probable cause.
