

1/7/00

Today at 11:40 a.m., I called D. Powers.  
I asked him where to look regarding  
Canadian work under air conditions.  
He said:

- ① References 28, 29, and 30 in  
NUREG/CR-6218
- ② Series of publications by Cox in  
Nuclear Technology over the last 5 years.
- ③ He has these references at home. (unfortunately).
- ④ VI-7 experiment at ORNL did not use enough  
oxygen.
- ⑤ Canadian fuel cladding is only  $\frac{1}{3}$  as thick  
as U.S. fuel cladding.
