Comments: The consolidation of numerous guidance documents into a single source is an excellent initiative. The format for each section is logical although I would recommend the addition of a listing of outdated guidance within each section for reference purposes.

The ability to access this document via the Internet is a definite plus. The capability provides timely data to all users without excessive costs. I would recommend updating annually with a monthly notice to users of changes.

The scope of this document is adequate for the purpose of ready reference. The document will serve as an invaluable tool for research and as an informational database for all users.

In addition to this document, I would suggest that the NRC develops an Internet database. This database could track employee exposure levels for both transient and permanent employees who work with nuclear radiation. The information would help ensure employers do not allow employees to exceed the exposure limits set in this document.

Thank you for the opportunity to comment.

Sincerely  
Brian Douglas Farris
