Subject: T/H Input

Joe,

According to my notes you will be providing the following input to Glenn today.

1. Adiabatic heatup calculations for different burnups.
2. 10 hour heatup curves for different burnups. (I believe these are adiabatic also)
3. Assumptions for time to boil calculations provided to Glenn previously.

Glenn,

Tim asked that once you receive the information, you review the information right away to ensure that it includes the information you expected and need. If not get back with Joe ASAP. Also, let Tim and I know.
