

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D.C. 20555-0001

February 18, 1993

Docket No. 50-220

Mr. B. Ralph Sylvia
Executive Vice President, Nuclear
Niagara Mohawk Power Corporation
301 Plainfield Road
Syracuse, New York 13212

Dear Mr. Sylvia:

SUBJECT: CORRECTED TECHNICAL SPECIFICATION PAGE FOR NINE MILE POINT NUCLEAR
STATION UNIT NO. 1 LICENSE AMENDMENT NO. 137 (TAC NO. M84855)

License Amendment No. 132 for Nine Mile Point Unit No. 1 was issued on
October 2, 1992. This license amendment included deletion of Technical
Specification (TS) 6.2.2.f on TS page 246. By letter dated October 28, 1992,
Niagara Mohawk Power Corporation (NMPC) submitted a license amendment request
for Nine Mile Point Unit No. 1 which proposed further changes on TS page 246.
However, the October 28, 1992, proposal failed to incorporate the changes
implemented by License Amendment No. 132 on page 246. Enclosed is a corrected
TS page 246 which should be used to replace TS page 246 that was issued on
January 5, 1993, as part of License Amendment No. 137 to Nine Mile Point Unit
No. 1 Operating License DPR-63.

Sincerely,

Donald S. Brinkman

Donald S. Brinkman, Senior Project Manager

Facility Staff (Cont'd)

- e. **A licensed Senior Reactor Operator shall be required in the Control Room during power operations, hot shutdown, and when the emergency plan is activated. This may be the Station Shift Supervisor-Nuclear or the Assistant Station Shift Supervisor-Nuclear or another Senior Reactor Operator during power operations or hot shutdown. When the emergency plan is activated during normal operations or hot shutdown, the Assistant Station Shift Supervisor-Nuclear becomes the Shift Technical Advisor and the Station Shift Supervisor-Nuclear is restricted to the control room until an additional licensed Senior Reactor Operator arrives.**

- f. **A licensed Senior Reactor Operator or licensed Senior Reactor Operator Limited to Fuel Handling shall be responsible for all movement of new and irradiated fuel within the site boundary. All core alterations shall be directly supervised by a licensed Senior Reactor Operator or licensed Senior Reactor Operator Limited to Fuel Handling who has no other concurrent responsibilities during this operation. All fuel moves within the core shall be directly monitored by a member of the reactor analyst group.**

- g. **DELETED**

- h. **Administrative procedures shall be developed and implemented to limit the working hours of facility staff who perform safety-related functions; e.g., licensed Senior Operators, licensed Operators, health physicists, auxiliary operators and key maintenance personnel.**

Adequate shift coverage shall be maintained without routine heavy use of overtime. The objective shall be to have operating personnel work a normal 8-hour day, 40-hour week while the facility is operating. However, in the event that unforeseen problems require substantial amounts of overtime to be used, or during extended periods of shutdown for refueling, major maintenance or major plant modifications on a temporary basis, the following guidelines shall be followed:
