Dr. William L. Sutton
Eastman Kodak Company
Kodak Park Works
Rochester, New York

Subject: APPLICATION FOR HYPRODUCT MATERIAL LICENSE

Dear Dr. Sutton:

Reference is made to your application for luminous markers painted with New England Nuclear Corporation "Safeglow" paint.

In order to continue our review of your application we shall need the following additional information:

1. A facsimile of the label which will be placed on each sign. The label should include the radiation symbol and at least the following words: "Caution - Radioactive Material - Do Not Open", and the name of the manufacturer.
2. The manner in which you will hold control over the devices. You should describe the kind of records you will keep to indicate the location of each marker.
3. A list of each plant and its location where you desire to use these markers.
4. The precautions which will be taken for storage of large quantities of the markers. This should include the type of ventilation available in case of fire, which might release large amounts of tritium into the air.

Upon receipt of this information we shall continue our review of your application.

Very truly yours,

James W. Hitch, Assistant Chief

Hyproduct Licensing
Isotopes Extension
Division of Licensing and Regulation
