

Dr. Daniel J. Pflaum, Chief, Materials and Information Branch, Division of Research

August 23, 1954

Lyall Johnson, Chief, Licensing Controls Branch, Division of Construction and Supply

NATIONAL RESEARCH CORPORATION - URANIUM METAL FOR RESEARCH

SYMBOL: CSLC:CTE

Attached in accordance with our telephone conversation this date is a copy of a letter addressed to this office by Dr. Manson Benedict of the National Research Corporation in Cambridge, Massachusetts, and a copy of our reply.

Since the end-use of the twenty pounds of uranium metal is clearly for research purposes we feel that the question of diversion of this quantity of source material from production channels is a matter within the purview of your Division.

You will recall that Charles Edwards of this office advised you of his conversation with John Kaufmann, GMC, concerning the classification aspects of this matter.

Please advise this office at such time as issuance of an AEC license authorizing the transfer of source material might be required.
