Subject: MACCS DECKS

Jim

Yesterday, I located tape backup hardware/software, but was unable to examine my backup tapes. There is a problem with the tape backup system, which I am "told" is a 486/Pentium incompatibility. This being the case unfortunately, I am unable to supply the MACCS decks which I promised.

Moreover as I mentioned previously, the hard copy MACCS output which I have retained only provide selected results and does not provide anything close to a complete echo of the input decks. The selected results are focused on those results published in the report, I will fax you a typical calculation hardcopy, that will indicate its minimal value to constructing the necessary MACCS input decks.

I'm sorry I can't be more helpful. This all occurred five years ago, and finding solutions to "486" problems would take time.

Rich
