Docket No. 50-440
Supplement to Operating License Amendment Request:
Withdrawal of One of Fourteen Generic, Administrative Changes to
the Perry Nuclear Power Plant Technical Specifications

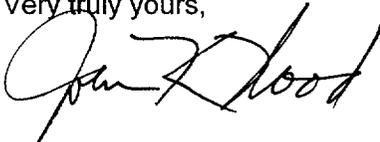

Ladies and Gentlemen:

A license amendment request submitted on November 9, 2000 (PY-CEI/NRR-2523L) included fourteen of the simpler, generic administrative/editorial/consistency improvements agreed upon between the Nuclear Energy Institute Technical Specification Task Force (TSTF) and the Nuclear Regulatory Commission (NRC) staff. One of the fourteen items included in the November 9, 2000 letter is addressed by TSTF-153, entitled "Clarify Exception Notes to be Consistent with the Requirement Being Excepted". This was discussed in Attachment 11 to the letter. Based on recent feedback from the NRC staff, it is understood the NRC is requesting that the Technical Specification Task Force develop a different method of clarifying the exception Notes addressed by TSTF-153.

The changes in the current version of TSTF-153 are considered to be administrative in nature, and are not considered to be essential to continued safe, efficient plant operation at the Perry Nuclear Power Plant. Therefore, pending development of the final wording for this item, the proposed Technical Specification changes based on TSTF-153 are being withdrawn.

There are no regulatory commitments contained in this letter or its attachments. If you have questions or require additional information, please contact Mr. Gregory A. Dunn, Manager - Regulatory Affairs, at (440) 280-5305.

Very truly yours,
