Farouk:

Hello.

I am forwarding you Glenn's request that the Spent Fuel Pool doese assessment be recalculated with evacuation assumptions consistent with general practice that 95% of people move. I believe Jason's last calcs were assuming 99.5% moved. We will need this for the final report scheduled for next month, as we are currently working on responding to public comments.

If Jason will not be able to support issueance of the final report (in concurrence early May) I need to let my management know that the Commission commitment won't be met.

Let me know if it will be possi le for him to support the effort.

Thanks
Mark

Jason Comparison: need you to request Farouk to have base case re-do the last calc

did for the effect of Ruthenium. Jason showed me that he only used 99.5% evacuation on the base case in the draft report; the rest of the cases were using 95%. However the Ruthenium work was done for 99.5% evacuation. Jason said he was too busy to change one number and run the deck, but he would do it if his BC asked him to do it. Nice sentiments.
