Subject: Public Meeting with NEI: Seismic Check List

You wanted to have some headings for discussion topics at the proposed meeting tentatively scheduled for December 8, 1999. My draft paper is in concurrence at the division level. The thrust in the proposed paper is that the frequency of initiating events ought to be decoupled from the structural capacity discussion and the structural performance goal can be set at 2 and 3 times the SSE level ground motion for higher and lower seismicity locations, respectively. To accomplish our goal of establishing the check list as a solution to the seismic issue at this meeting I suggest the following topics:

- : Use of Seismic Check List
 - Lower Hazard Sites (Eastern US Plants)
 - Higher Hazard Sites (West Coast Plants)
- : Graded Seismic Check List
 - Higher Hazard Location
 - Lower Hazard Locations
- : Outlier Sites
 - Perform Plant Specific Fragility Assessment
 - Plant Specific PRA for Outlier Sites

I hope these notes are helpful. Thanks,
Goutam
