Notes:

1. Shelter remaining zones to have population indoors to monitor EAS broadcasts.
2. Shelter may be the appropriate action for controlled releases of radioactive material from containment IF there is assurance that the release is short term (puff release) and the area near the plant cannot be evacuated before the plume arrives.
3. For actual or projected doses ≥ 1 REM TEDE or ≥ 5 REM CDE (Thyroid), declare a General Emergency and recommend evacuation of general public from the affected areas.
4. Revise PAR if wind direction shifts or significant rad. condition changes are detected by field teams.
