Subject: Follow-up to User Need on SFP Study

Farouk,

As we discussed, we have a continuing need for RES support for the Spent Fuel Pool Decommissioning Study. I believe that we should consider this a continuation or follow-up to the earlier User Need Letter on this subject. The SFP source term and dose calculations will be used directly in the final report to the Commission and will support any future exemptions and/or rulemakings.

The support previously provided by Charlie Tinkler and Jason Schaperow was essential to the draft SFP Study and their assistance at this time is also essential.

I understand that our staffs are currently discussing the specific analyses needed.

Thanks for your help and continuing support,

Gary
