Subject: LLNL figure

Goutam - Here is the LLNL figure that you requested. I have inserted it into a Word document so that you can readily print it out. I hope this is what you wanted. Do not hesitate to call if there is anything else that I can provide you.

Goutam – here is the LLNL figure you requested. The top 10 sites in SFP failure frequency are:

Robinson
Pilgrim
Yankee Rowe
Vogle
Clinton
Cooper
Shoreham
Fort Calhoun
Brunswick
LaSalle

All soil sites.

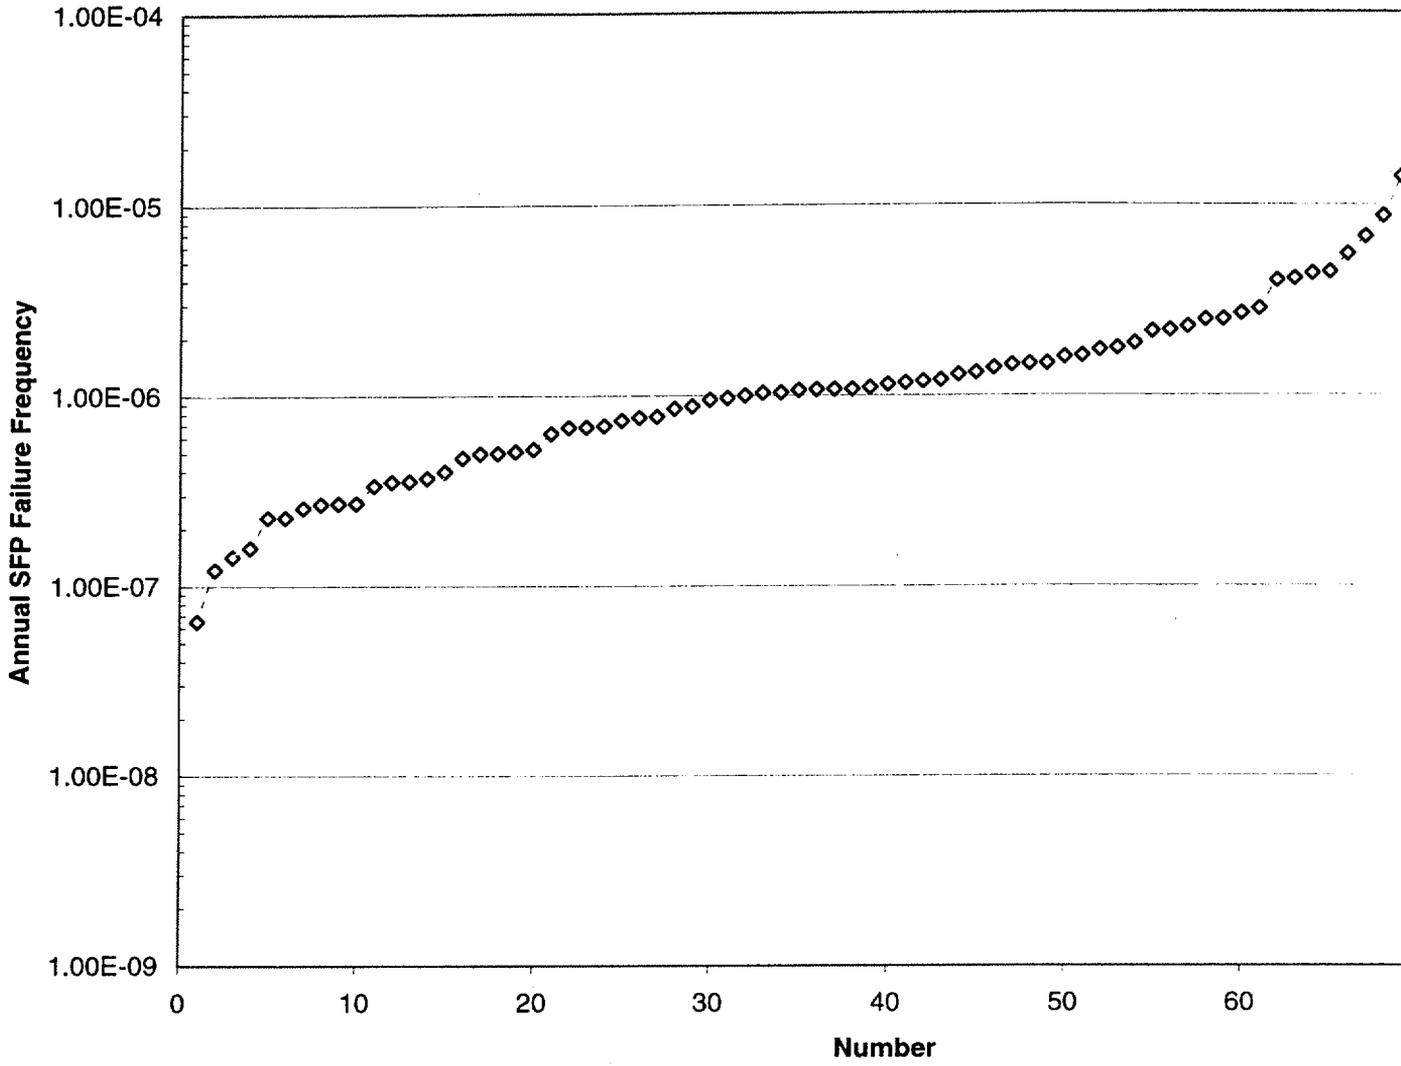

I've also added a figure containing the the EPRI and geometric mean values.

I must say that I left the meeting last week with a familiar frustrated feeling. Also, I don't believe the issue is as simple as truncating sigma. I think you need to consider truncating your consultants – it is time for a fresh look at this issue – also – no more SSHACs.

Tom
