Subject: Meeting to discuss technical input from Dr. Kennedy

I have scheduled a meeting with Sher Bahadur to discuss tasking Dr. Kennedy with providing his views on the following two issues:

- (1) the most likely SFP failure modes and locations for BWR and PWR pools
- (2) the expected level of collateral offsite damage given a seismic event of the magnitude necessary to fail the SFP (i.e., damage to notification and communication systems, buildings, roads, bridges, and other items needed for effective emergency response)

These two issues are critical to the SFP study and need to be addressed in the TWG report. Dr. Kennedy's input can be very helpful in this regard.

The meeting is scheduled for 10:00am this morning in Sher's office (T10D33). Pls let me know if you can join us.

CC: George Hubbard, Sher Bahadur
