**Subject:** Questions on texture analysis

Hello, K.L.!

How have you been doing? Have you survived all of the recent bad weather associated with the hurricanes? Fortunately, we did not get inundated with excessive rain. Just enough to make our grass green again!

I am working on a project that involves the assessment of texture analysis results. Some of my colleagues and I have a few questions regarding the use of texture analysis to qualify cladding material for use in commercial reactor fuel assemblies. Also, we are interested in getting a better appreciation for whether texture analyses can inadvertently be used to qualify substandard material. Would you have some time to talk to us next week via teleconference call? We would be happy to call you at a mutually convenient time.

I hope you are feeling well. I look forward to hearing from you.

Kim Gruss
