Subject: Re: Proposed Op Events Agenda

I received an email yesterday (see attached file) from Eric Reber, Region I (?), concerning a contaminated package from Mexico's Laguna Verde Nuclear Power Plant which was received by GTS Duratek in Memphis, TN. I have no idea if this rises to the level of an item to be covered or if it falls within the time frame of interest. We have taken no action ourselves except to send an information copy to our contact in the Mexican regulatory agency in Mexico City.

I am preparing the agenda for Monday's Operational Events Briefing. Followup items from last month are attached. No new items have been identified this month. Please let me know if you have any new items you wish to add.

Lead offices should review the NMED record for each event and determine if it is accurate. NMED item numbers are provided in the attached file with links to the NMED web site. If the action is "Track until NMED confirmed accurate," we can drop the item from the agenda before the briefing if you let me know whether the NMED record is accurate.
