

Regulation:

To prescribe or control
by regulations.

Webster's Dictionary

2

The NRC is upgrading
the *prescribing* and
the *controlling*.

3

Study 1. Everyone that does not receive medical attention eventually dies.

Recommendation: Establish a plan to require that everyone receives mandatory health care at significantly increased frequency.

4

**Study 2. Everyone that receives
medical attention eventually dies.**

**Recommendation: Establish a plan
to require that all health care
systems be eliminated**

Recommendations:

Forgot to address the minor issue of quality of life.

The substantial cost of the two plans were comparable:

Plan 1: more health care

Plan 2: more lawyers

**“It is not possible, generically,
to rule out the possibility of
death.”**

7

Risk-informed regulation is an integral, increasingly quantitative approach to regulatory decision-making that incorporates deterministic, experiential and probabilistic components to focus on issues important to safety, which avoids unnecessary burdens to society.

8
