

Risk Informing Decommissioning Policy

Commission Meeting

February 20, 2001

Ralph E. Beedle, NEI

2/18

Clear Coherent Decommissioning Policy is Needed

- Stakeholders: Public, states, industry
- Implications:
 - Past actions: costly requirements for operating plants abandoned
 - Decommissioning funding estimates do not include staffing for costly operating plant requirements

Risk Study

- Is incomplete
- Overstates risk
- Piecemeal
- Unreviewed

Cost drop

*Ru - 100%
Nothing in between*

Needs more analysis

Study is dominated by large, low probability seismic events

- Use of these events as sole basis for regulatory action is precedent setting
- Opportunities to identify and apply practical risk insights are missed because large seismic events lead to bounding consequences with no opportunity for mitigation

BiGRPS + research
Not reasonable for policy
Extraordinary event

SSB operating beyond design basis

Misner
• New things Always happen
• Review exemptions required
• Risk mindset

eedle
Millstone 1

Recommendations

- Complete analyses to arrive at best estimate
- Conduct formal, independent peer review
- Provide staff with policy guidance on treatment of large, low probability seismic events

More realistic treatment

Too wide implications need peer review
