Dear Mr. Lesar:

I am highly opposed to the idea of a possible "plutonium fuel factory" at the Savannah River Site. I would be opposed to such an experimental fuel factory anywhere in the world, but most especially in the state in which I live.

This type of fuel has never been manufactured or used anywhere and this first-of-a-kind plant needs much more research. You just cannot be too careful with nuclear power anyway and to try to produce it from weapon plutonium is crazy.

Please do not license this facility.

Sincerely,

Phillip Patton
