DATE: June 21, 1995
RE: Model 120

To confirm Ion Track Instruments has discontinued manufacture of the Model 120 Leakmeter. We have not sold a unit in the USA in 1995 and have a zero stock level.

The Model 120 Leakmeter will not be sold in the USA and has been directly replaced with the Model 200 Leakmeter.

As discussed, we will however continue to service and calibrate any Model 120 Leakmeter returned to ITI for repair. As with all our products we are committed to do this for a number of years. I would like to assure you that full documentation concerning the 120 Leakmeter will be forwarded to you as soon as I have received all the relevant information from our manufacturing plant.

We have received a number of orders for the Leakmeter 200, which require urgent shipment. These orders have been held since March 1995, I would therefore appreciate receiving the license confirmation as soon as possible.

I thank you for your attention to our application and apologize for the consistent request for status update, however, the Leakmeter represents a considerable percentage of our business in 1995 and we are obviously very eager to start selling the product.

Sincerely yours,

David Morris
President

RECORD OF TELECON

CONTACT: Mr. David Morris
President
Ion Track Instruments
508-658-3767

DATE: May 30, 1995

SUBJECT: Resolution of company name and device model number

Mr. Morris was contacted this date to resolve differences in various submissions regarding the company name and the model of the instrument being registered. He stated that ITI Qualitek, whose name appears on their May 12, 1995, letter is a division of Ion Track Instruments. He further stated that the instrument label will continue to bear the name "Ion Track Instruments" as prescribed on drawings previously submitted.

The model number has previously been referred to as Model 120-200, Model 200, and Leakmeter 200. The last name is the one which appears on the instrument, and Mr. Morris agreed that is the one which should appear in the registry. Hence, the registry will be written for this model.

This telephone contact was made by Mr. Robert Waterfield, JUPITER Corp., under contract to NRC, Sealed Sources and Devices Branch.
