New Hill, NC 27562-0165

SUBJECT: ANNUAL ASSESSMENT LETTER - SHEARON HARRIS NUCLEAR POWER
PLANT (NRC INSPECTION REPORT 50-400/01-01)

Dear Mr. Scarola:

On May 1, 2001, the NRC staff completed its end-of-cycle plant performance assessment of the Shearon Harris Nuclear Power Plant. The end-of-cycle review for Harris involved the participation of all technical divisions in evaluating performance indicators (PIs) and inspection results for the period of April 2, 2000, to March 31, 2001. The purpose of this letter is to inform you of our assessment of your safety performance during this period and our plans for future inspections at your facility so that you will have an opportunity to prepare for these inspections and to inform us of any planned inspections which may conflict with your plant activities.

Overall, Harris operated in a manner that preserved public health and safety and fully met all cornerstone objectives. Plant performance for the most recent quarter, as well as for the first three quarters of the assessment cycle, was within the Regulatory Response Column of the NRC's Action Matrix, based on a White PI (High Pressure Injection System Unavailability) and a White inspection finding (Inoperable charging/safety injection pump). Because the White inspection finding pertains to the same underlying issue as the PI, the NRC considers this to be a single issue in the mitigating systems cornerstone. We have completed a supplemental inspection of this issue per Inspection Procedure 95001. The inspection determined that the completed and proposed corrective actions, including actions to prevent recurrence, appropriately addressed the results of your root cause evaluation, and your implementation schedule was consistent with the overall safety significance of the problem. The White performance issue was closed.

We plan to conduct baseline inspections at your facility through May 31, 2002. We also plan to perform special inspections of your steam generator replacement activities.

As you are aware, the following issues are still under review as part of the Significance Determination Process and supplemental inspections may also be warranted if these issues are determined to be of greater than very low safety significance (Green):

- Unresolved Item (URI) 50-400/99-013-01 (Adequacy of Thermo-Lag Fire Barrier To Meet Plant Licensing Basis Requirements),
- URI 50-400/99-013-02 (Adequacy of the 10 CFR 50.59 For Changes Made to the UFSAR to Revise the Fire Rating of Selected Thermo-Lag Fire Barriers),

- URI 50-400/99-013-03 (Adequacy of Hemyc/MT Cable Wrap Fire Barrier Qualification), and
- Finding (FIN) 50-400/00-04-01 (Inaccurate Risk Assessment for Startup Transformer).

The enclosed inspection plan details the scheduled inspections that will occur through May 31, 2002. This inspection plan is provided to minimize the resource impact on your staff and to allow for scheduling conflicts and personnel availability to be resolved in advance of inspector arrival onsite. Routine resident inspections are not listed due to their ongoing and continuous nature.

For your information, the NRC is in the process of aligning the inspection and assessment cycle with the calendar year (CY). In order to transition to a CY cycle (January 1 - December 31), the current inspection and assessment cycle will consist of only three quarters (i.e., the second, third and fourth calendar quarters of CY 2001). As a result, for this transition period only, the number of inspection activities have been modified accordingly and a mid-cycle review letter and accompanying inspection plan will not be issued.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be made available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/NRC/ADAMS/index.html> (the Public Electronic Reading Room).

If circumstances arise which cause us to change our inspection plan, we will contact you to discuss the change as soon as possible. Please contact me at (404) 562-4501 with any questions you may have regarding this letter or the inspection plan.

Sincerely,

/RA/

Loren R. Plisco, Director
Division of Reactor Projects
