**RE: Corrective Action Report 10, West Evaporation Pond Leak**  
**Permit to Mine 633, License SUA-1548, Docket 40-8964**

Dear Mr. Ingle:

On September 14, 2000, during a routine inspection, it was discovered that the west evaporation pond sump contained greater than 6 inches of water. The water level in the pond, four feet six inches at the time of the discovery, was immediately lowered in order to stop the leak. The sump water was analyzed for chloride, specific conductance, bicarbonate,  $U_{nat}$  and sulfate with the results shown below:

Chemical	Concentration
Chloride	8,510 mg/l
Specific Conductance @ 25 °C	32.95 m Siemens
Bicarbonate	283.1 mg/l
$U_{nat}$ as $U_3O_8$	22.6 mg/l
Sulfate	7,429 mg/l

Upon receipt of the confirming analysis, both Steve Ingle of WDEQ and John Lusher of NRC were notified via telephone on September 22, 2000.

After patching the suspect locations, the water level was slowly raised beginning on October 30<sup>th</sup>. On November 6<sup>th</sup>, with the pond level at four feet six inches, the sump began collecting water. The water level of the pond was dropped to three feet eight inches in order to stop the leakage.

The pond did not leak again until January 6, 2001. A sample was taken on the same day with the following results:

*NMSSOI Public*

Chemical	Concentration
Chloride	9,428 mg/l
Specific Conductance @ 25 °C	41.39 m Siemens
Bicarbonate	448 mg/l
U <sub>nat</sub> as U <sub>3</sub> O <sub>8</sub>	25.0 mg/l
Sulfate	11,212 mg/l

A weekly sample taken on January 19, 2001 contained 8,300 mg/l chloride and had a specific conductance of 22.22 m Siemens. The pond quite leaking on January 22<sup>nd</sup> without any change in the pond's water level and has not leaked since.

A monthly sample was taken on 3/15/01; results shown below.

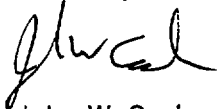

Chemical	Concentration
Chloride	2,740 mg/l
Specific Conductance @ 25 °C	13.98 m Siemens
Bicarbonate	472 mg/l
U <sub>nat</sub> as U <sub>3</sub> O <sub>8</sub>	6.5 mg/l
Sulfate	4,196 mg/l

The pond did not leak again until 3/29/01 so a weekly sample was taken. The conductivity was at 14.80 m Siemens and the chloride was at 6,400 mg/l. The water level was drawn down to the one foot six inch (1' 6") level and the leakage stopped.

Repairs were made to the liner during this report period and the water level was slowly raised to the four feet one inch (4' 1") level without any leakage. The water level will be raised until all recent repairs are submerged and confirmed as satisfactory.

Additional monthly reports will be submitted until correction of the situation is confirmed. If you have any questions or comments regarding the submittal, please feel free to contact me at (307) 358-3744, ext. 62.

Sincerely,

John W. Cash  
Manager EHS and Regulatory Affairs
