

# Technical Working Group Paper

- 1.0 Executive Summary
- 2.0 Introduction
- 3.0 Deterministic Evaluation of Spent Fuel Heatup
  - 3.1 Fire Protection Evaluation of the Phenomena of a Zircaloy Fire
  - 3.2 Spent Fuel Heatup Analyses
  - 3.3 Potential for Criticality
- 4.0 Risk Assessment
  - 4.1 Internal initiating events (details in appendix) give intermediate estimates
    - 4.1.1 Internal initiator frequencies
    - 4.1.2 ETs and FTs
    - 4.1.3 Equipment failure conditional probabilities (details in app)
    - 4.1.4 Human errors (details in appendix)
  - 4.2 External events
    - 4.2.1 Seismic
    - 4.2.2 Tornado
    - 4.2.3 Aircraft
    - 4.2.4 External flood (not evaluated - is site specific)
  - 4.3 Consequences of Zirc fire with various evacuation assumptions
    - 4.3.1 Time Dependent Parameter Effects on Consequences
    - 4.3.2. Consequences of a Severe Spent Fuel Pool Accident
  - 4.4 Risk Estimates
  - 4.5 Risk Assessment conclusions, insights, and recommendations

Q15

**5.0 Supporting Information**

**5.1 Maintenance Rule**

**5.2 Quality Assurance**

**5.3 Wet ISFSIs**

**5.4 Design Bases Events**

**6.0 Recommended Approaches and Methods**

**7.0 Recommended Future Work**

**8.0 References**

**Appendices**

**A-1 Assumptions, Equipment failure rates, Human errors**

**A-2 Event Trees and Fault Trees**

**A-3 Structural Integrity of Spent Fuel Pool Structures Under Seismic Events**

**A-4 Structural Integrity of Spent Fuel Pool Structures Under Tornadoes and High Winds**

**A-5 Structural Integrity of Spent Fuel Pool Structures for Heavy Load Drops**
