Subject: Discussion with Jim Bell Of Com McGaffigan's office

On 7/30 I called Jim Bell to explain to him the schedule for providing the Commissioner with the TWG's plans and schedules associated with the decommissioning risk study. However, Bell initiated a detailed discussion of his views on specific technical issues discussed at the workshop. I explained to Bell the staff's position on many of the technical issues (while explaining that such conversations would be better held with the specific members of the tech staff working on those issues). Re: heavy loads, Bell pushed me to say whether the issue would go away if Phase 2 of 0612 was required. I stated that I would have the technical experts involved in that area call him back. Thus, would you and/or Brian Thomas call Jim Bell and pursue that issue?

Bell also discussed areas of the risk analysis, including human reliability issues and had to hang up before he was through. When he calls back, I will try to add Diane or Glenn Kelly to the conversation.
