MONTICELLO NUCLEAR GENERATING PLANT
Docket No. 50-263 License No. DPR-22

Replacement Technical Specification Pages for the Previously Submitted Radiological
Effluent Technical Specifications Conformance To Standard Technical Specifications
and Generic Letter 89-01

Attached are revised Technical Specification pages reflecting the current version of the Monticello Technical Specifications. These pages were previously submitted to the NRC from the Monticello Nuclear Generating Plant by letter dated December 5, 2000.

Revised pages are being submitted to reflect changes to the Monticello Technical Specifications, Table of Contents pages, that have been made since the submittal of the License Amendment Request. A revision to page 229g is also needed to reflect changes to the Technical Specifications that have been made since the submittal of this request. Additionally, two pages are being revised to correct typographical errors: 1) on page 251 in the first paragraph of the Annual Radiological Environmental Operating Report the term "site" has been changed to "unit" and 2) on page 258 in item K.4 the term "6.8.K" has been changed to "6.8.K.2."

The above referenced changes are administrative and editorial in nature and have no technical impact on pages previously submitted. Therefore, the Determination of No Significant Hazards Consideration and Environmental Assessment submitted by the original letter dated December 5, 2000, are also applicable to this supplemental submittal.

If you have any questions relating to these revised pages or the previously submitted License Amendment Request, regarding the Radiological Effluent Technical

A001

Specifications Conformance to Standard Technical Specifications and Generic Letter 89-01, please contact Doug Neve, Licensing Project Manager (Interim), at (763) 295-1353.

	6.7 Reporting Requirements	248
	6.8 Programs and Manuals	253
	6.9 High Radiation Area	259

Bases 3.15/4.15:

A program of inservice testing of Quality Group A, B, and C pumps and valves is in effect at the Monticello plant that conforms to the requirements contained in Section XI of the ASME Boiler and Pressure Vessel Code or where alternate testing is justified in accordance with Generic Letter 89-04. If a Code required inspection is impractical for the Monticello facility, a request for a deviation from that requirement is submitted to the Commission in accordance with 10 CFR 50, Section 50.55a(g)(6)(i).

B. Reportable Events

The following actions shall be taken for Reportable Events:

- a. The Commission shall be notified by a report submitted pursuant to the requirements of Section 50.73 to 10 CFR Part 50 and,
- b. Each Reportable Event shall be reviewed by the Operations Committee and the results of this review shall be submitted to the Safety Audit Committee and the corporate officer with direct responsibility for the plant.

C. Environmental Reports

1. Annual Radiological Environmental Operating Report

The Annual Radiological Environmental Operating Report covering the operation of the unit during the previous calendar year shall be submitted by May 15 of each year. The report shall include summaries, interpretations, and analyses of trends of the results of the Radiological Environmental Monitoring Program for the reporting period. The material provided shall be consistent with the objectives outlined in the Offsite Dose Calculation Manual (ODCM), and in 10 CFR 50, Appendix I, Sections IV.B.2, IV.B.3, and IV.C.

The Annual Radiological Environmental Operating Report shall include the results of analyses of all radiological environmental samples and of all environmental radiation measurements taken during the period pursuant to the locations specified in the table and figures in the ODCM, as well as summarized and tabulated results of these analyses and measurements in the format of the table in the Radiological Assessment Branch Technical Position, Revision 1, November 1979. In the event that some individual results are not available for inclusion with the report, the report shall be submitted noting and explaining the reasons for the missing results. The missing data shall be submitted in a supplementary report as soon as possible.

K. Technical Specifications (TS) Bases Control Program

This program provides a means for processing changes to the Bases of these Technical Specifications.

1. Changes to the Bases of the TS shall be made under appropriate administrative controls and reviews.
2. Changes to Bases may be made without prior NRC approval provided the changes do not involve either of the following:
 - a. a change in the TS incorporated in the license; or
 - b. a change to the USAR or Bases that requires NRC approval pursuant to 10 CFR 50.59.
3. The Bases Control Program shall contain provisions to ensure that the Bases are maintained consistent with the USAR.
4. Proposed changes to the Bases that involve changes as described in a. or b. of Specification 6.8.K.2 above shall be reviewed and approved by the NRC prior to implementation. Changes to the Bases implemented without prior NRC approval shall be provided to the NRC on a frequency consistent with 10 CFR 50.71(e).
