Comments: (This is my second message.)

On page 13, Issue 2.a, Under the section titled Preliminary Impact Assessment is this statement:
"Further, the new license holder has a strong incentive to assure that the plant will meet NRC requirements upon completion of the transfer."

It is my opinion that the new owner will have no stronger incentive than the previous owner. The previous owner was working in a regulated or cost plus environment. If he could delay fixing something, the feedwater reactor level control valves, for example, why, with this precedent set, won't the new owner expect to be able to do the same?

Thank you,
Tom Gurdziel
