Subject: EPRI SG GUIDELINES

I'm beginning to see a number of references to the EPRI PWR Steam Generator Examination Guidelines in our literature. For example, they were mentioned in SECY 00-0078 - Status and Plans for revising SG tube integrity regulatory framework, dtd 3/30/00 - in licensee submittals and even in our own insp repts.

Do we have copies of those guidelines? Have we studied? As I understand it, those guidelines include both "mandatory" and "non-mandatory" elements. Do we know what to expect to see as we inspection SG ISI activities???

Jim
