Subject: Info. Notice 97-26

Do you guys have a quick feedback on what IP2's take was on Information Notice 97-26, "Degradation in small-radius u-bend regions of steam generator tubes?" I remember Wayne and I briefly talking about it. Did they get it in time for their 1997 examination? What did they do or say about it? I've checked headquarters phone records for IP's 1997 examination and it appears the subject/issue was not brought up.
