Subject: IP2 Lessons Learned..

Messrs E. Gray and M. Modes;

On July 20, members of the IP2 lessons-learned task group will be in the regional office talking to "key" players about the IP2 event and all the "what ifs." Could you please share with the team, any insights you might have on what barriers (if any) were broken by the licensee, or NRC, or NEI/EPRI/Westinghouse that allowed the tube rupture. We also have some interest in whether the defunct mobile lab could have been useful in this case. How about **11:00 A.M.** in the small DRP conference room? If you won't be in the office on the 20th, please send me your input via email, if you have one. Thanks.

Jimi
