A meeting was held Thursday morning at HQ with the Region I inspection team, NRR DRP, and NRR Division of Engineering to discuss the conclusions and findings of the Indian Point 2 Steam Generator Tube Failure Event by the Region I inspection team. A consensus was reached regarding the conclusions and findings to ensure consistency between the Region I Inspection Report and the NRR Safety Evaluation. The Lessons Learned Team also participated in the meeting.

The Region I Augmented Inspection Team Follow-up Final Report for the Indian Point 2 Steam Generator Event (except the Emergency Plan, which is issued separately) has been completed and is scheduled to be issued this week. There are seven (7) Green findings and one unresolved issue.

The Emergency Plan Final Report for the AIT Follow-up is going through final internal NRR review and is expected to be issued next week. There are six (6) Green findings and three (3) White findings. Both Reports will have associated communication plans.
