Stephanie - I think I have the Table from the CMOA - is it table 4.5-1, page 35? If so I think you are talking about SG 22; R34C51 1.1 V - 1995, 2.6 V- 1997 , and 2.94 V 2000. Like we talked on Friday I will call ConEd today and ask them for the specific information, including the bobbin and cecco data on this indication and ask them for their statement about why it was not previously detected.
