Manager, Morris Operation*

*License Renewal Meeting  
June 6, 2001*

In accordance with the requirements of 10 CFR 72, General Electric Company submitted a license renewal application (May, 2000) for its Morris Operation, Independent Spent Fuel Storage Installation (ISFSI) located at 7555 East Collins Road in Morris, Illinois. Included with the application was a revised Consolidated Safety Analysis Report, Applicant's Environmental Report, and 1999 Financial Statement. The QA Plan (Revision 2, April 1998), Security Plan (April 1995), and Emergency Plan (February 1997) were been previously approved by the NRC and remain unchanged.

Facilities described in the application are owned and operated by General Electric Company, a corporation under the laws of the State of Connecticut, with its principal place of business at Fairfield, CT. The facility is operated through the Company's GE Nuclear Energy Division with headquarters in San Jose, California and operations in Morris, Illinois.

GE is a broadly diversified corporation involved in research, design, manufacture, and marketing of products and services in several fields including industrial products, technical systems and materials, consumer products, and power systems. The latter activity includes nuclear systems, equipment, fuel and services.

The Company's experience in nuclear activities includes research and development of nuclear submarine prototype reactors, operation of the government's Hanford facilities for more than 17 years and development, design, manufacture and erection of boiling water reactors currently operating, or under construction, at electric power stations in the United States and throughout the world. The staff of GE Nuclear Energy (GENE) includes hundreds of scientists, engineers and technicians, representing one of the largest pools of nuclear knowledge and experience in the world.

The Company has owned and operated Morris Operation since its construction under AEC Provisional Construction Permit No. CPCSF-3 issued in December, 1967 as a spent fuel reprocessing facility, and specifically as an ISFSI for the last 19 years under the current NRC License SNM-2500.

GE has determined that the application in the submittal is acceptable for ensuring activities at Morris Operation ISFSI are conducted without endangering the health and safety of the public, and are in compliance with the applicable regulations in 10 CFR 72. Also, approval of the application will not be inimical to the common defense and security, and the application does not involve any adverse environmental impact.
