Subject: Inspection Report Input from early on

Hi all - we still need any input from Caius and Stephanie, specifically what they did onsite in Feb. and March, we also need the dates that they were onsite. This is particularly important to get Ian's review of Caius' input - so that we can make a knowledgeable call on 2-5. If Caius' input is rough it does not matter - we just need something - about your assessment of licensee performance in response to the tube failure, the 1997 ISI activities, and/or the performance during the 2000 ISI..

ConEd should be sending the root cause RAI answers in today - so we should have them early next week. Next week we will need to get an idea how long it will take to review these documents and make a adequacy call on the assessment. At this point I think they have had enough help and we should deal with any further problems with the root cause in the inspection arena. My team can deal with the root cause problems if we discuss the inputs next week.

We will need anything that you want the team to look at from a CMOA review and SE issuance ASAP. Even if this is piecemeal we need to get started next week if possible.
