INTRODUCTION

By letter dated May 29, 1974, Duke Power Company proposed a change to the Oconee Nuclear Station, Units 1 and 2 Technical Specifications. The proposed change involves restructuring and adding supervisory positions in the station organization.

DISCUSSION

The significant changes in the station organization in this proposal are as follows:

- (1) Instrument and control personnel will be moved from the Technical Support Group and will report to an Instrument Engineer who in turn will report to the Maintenance and Instrument Engineer.
- (2) Health physics personnel will report to a Health Physics Supervisor and chemistry personnel will report to the Station Chemist. Both supervisors will report to the Technical Support Engineer. At present, chemistry and health physics personnel report to the same supervisor.

The supervisory and professional personnel who will fill the positions shown in the revised organization chart will meet the training and experience requirements described in Sections 4 and 5 of ANSI 18.1.

EVALUATION

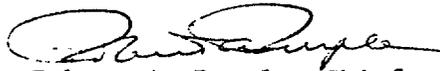

This proposed change provides for a separation of the maintenance and support personnel as to function and assigns a supervisor to each function. The professional personnel to whom these supervisors report are also assigned along functional lines. The additional supervisors provided for in this change will serve to strengthen the supervision and administration of the Oconee Nuclear Station, particularly with regard to maintenance activities.

CONCLUSION

The staff concludes that: (1) the change does not involve a significant hazards consideration since it does not involve a substantial increase in the probability or consequences of accidents previously considered and does not involve a substantial decrease in the margin of safety; and (2) there is reasonable assurance that the health and safety of the public will not be endangered by operation in the proposed manner.
