Dear Sir or Madam:

Subject: Comments on Draft Report: **Criteria for Preparation and Evaluation of radiological Emergency Response Plans and Preparedness in Support of Nuclear Power Plants** – NUREG-0654, FEMA-REP-1, Rev.1 Addenda

The purpose of this letter is to request that consideration be given to citing ANSI/ANS- 3.11-2000 *American National Standard for Determining Meteorological Information at Nuclear Facilities* as the reference source of acceptance criteria for meteorological measurements. This reference is proposed as a replacement to the currently cited Supplement 1 to NUREG-737, "Clarification of TMI Action Plan Requirements", January 1983, supersedes this citation.

The referenced item of concern is proposed addenda Item 23 of proposed draft published in Federal Register Notice 66 FR 22137 No. 86 issued on May 3, 2001. The proposed addenda in the Federal Register Notice actually references Regulatory Guide 1.23 Rev. 1, which was never issued by the NRC.

The new ANSI/ANS 3.11-2000 standard provides the most recent guidance for meteorological measurements.

Thank you for the opportunity to provide comments.

Sincerely,

Robert F. Yewdall
