

through this system daily.

Radioactive carcasses will be stored in appropriate freezers until they can be buried in accordance with CFR 20.304. All other contaminated radioactive waste material will be stored in appropriate 55 gal. drums on the premises until their contents can be buried in accordance with 10CFR 20.304.

Radioactive waste shall be buried on federal land owned by the Laboratory of Perinatal Physiology located next to the Sabana Seca Naval Station approximately 12 miles from the laboratory site in San Juan (marked Project Site on the attached map. The laboratory is located to the north of the U.S. Naval Station). The radioactive waste and radioactive carcasses shall be sealed in appropriately labeled 55 gal. metal drums and transported in a U.S. Government owned vehicle to the project site at Sabana Seca in accordance with 49CFR 173 and 14CFR 103. The contents of these drums will be buried in accordance with 10CFR 20.304.
