AVAILABILITY OF REFERENCE MATERIALS IN NRC PUBLICATIONS

NRC Reference Material

As of November 1999, you may electronically access NUREG-series publications and other NRC records at NRC's Public Electronic Reading Room at www.nrc.gov/NRC/ADAMS/index.html.

Publicly released records include, to name a few, NUREG-series publications; *Federal Register* notices; applicant, licensee, and vendor documents and correspondence; NRC correspondence and internal memoranda; bulletins and information notices; inspection and investigative reports; licensee event reports; and Commission papers and their attachments.

NRC publications in the NUREG series, NRC regulations, and *Title 10, Energy*, in the Code of *Federal Regulations* may also be purchased from one of these two sources.

Some publications in the NUREG series that are posted at NRC's Web site address www.nrc.gov/NRC/NUREGS/indexnum.html are updated periodically and may differ from the last printed version. Although references to material found on a Web site bear the date the material was accessed, the material available on the date cited may subsequently be removed from the site.

Non-NRC Reference Material

Documents available from public and special technical libraries include all open literature items, such as books, journal articles, and transactions, *Federal Register* notices, Federal and State legislation, and congressional reports. Such documents as theses, dissertations, foreign reports and translations, and non-NRC conference proceedings may be purchased from their sponsoring organization.

Copies of industry codes and standards used in a substantive manner in the NRC regulatory process are maintained at—

DEVELOPMENTAL ASSESSMENT MANUAL**

VOLUME II: APPENDICES

ABSTRACT

Los Alamos National Laboratory has developed the Transient Reactor Analysis Code (TRAC) to provide advanced, best-estimate simulations of real and postulated transients in pressurized water reactors (PWRs) and for many related thermal-hydraulic facilities. The modernized TRAC-M/F77, Version 5.5, is the latest release version. The previous release code, TRAC-PF1/MOD2, Version 5.4, was modified by removing nonstandard FORTRAN constructs to produce a standard FORTRAN 77 (F77) code. In the process, a more uniform programming style was established. TRAC-M/F77 (1) is more portable and maintainable than Version 5.4; (2) retains TRAC's essential features, a one- and/or three-dimensional, two-fluid treatment for the thermal hydraulics; (3) has other necessary modeling capabilities to model a reactor system; and (4) has a newly enhanced reflood model.

This Developmental Assessment Manual describes the TRAC-M/F77, Version 5.5, assessment calculations that were compared with analytical calculations and experimental data. The manual is issued in two volumes. Volume I contains the assessment sections, and Volume II contains the appendices. The appendices to the manual include the input listings of the assessment problems, and code-data comparison of assessments exercised with different reflood, grid spacer, and noding modeling options. The comparisons were performed to determine the accuracy and applicability of TRAC-M/F77. Based on these assessments against analytical solutions, separate-effects tests, and integral tests, we believe that TRAC-M/F77 is a viable calculational tool for analyzing PWRs during a loss-of-coolant accident and operational transients. In addition, the developmental assessment calculations demonstrate that TRAC-M/F77 is applicable to a wide range of test facilities and is accurate in terms of predicting major trends.

9 Akimoto mist condensation experiment: mg=40, mli=330, Tin=323K
10 *
11 * This test problem is prepared from the paper by Akimoto and Kowawa
12 * and Aoki , 'Analysis of Direct Contact Condensation of Flowing Steam
13 * onto Injected Water with Multifluid Model of Two-Phase Flow,'
14 * Journal of Nuclear Science and Technology, 20 (12) pp. 1006-1022
15 * December 1983. In this paper there is a differential pressure and
16 * liquid film temperature data as a function of horizontal distance
17 * for mg=40 kg/m2s, ml=330 kg/m2s and Tin=323K. This input LISTING
18 * simulates this test with TRAC-PF1/MOD2 and prepared by Cetin Unal
19 * April, 23 1992.

9 Akimoto plug condensation experiment, mg=20, mli=600, Tin=323K
10 *
11 * This test problem is prepared from the paper by Akimoto and Kowawa
12 * and Aoki , 'Analysis of Direct Contact Condensation of Flowing Steam
13 * onto Injected Water with Multifluid Model of Two-Phase Flow,'
14 * Journal of Nuclear Science and Technology, 20 (12) pp. 1006-1022
15 * December 1983. In this paper there is a differential pressure and
16 * liquid film temperature data as a function of horizontal distance
17 * for mg=40 kg/m2s, ml=330 kg/m2s and Tin=323K. This input LISTING
18 * simulates this test with TRAC-PP1/MOD2 and prepared by Cetin Unal
19 * April, 23 1992.

9 Akimoto transitional condensation exp.: mg=stepped, ml=ramped, Tin=323k
10 * This test problem is prepared from the paper by Akimoto and Kowawa
11 * and Aoki, 'Analysis of Direct Contact Condensation of Flowing Steam
12 * onto Injected Water with Multifluid Model of Two-Phase Flow,'
13 * Journal of Nuclear Science and Technology, 20 (12) pp. 1006-1022
14 * December 1983. In this paper there is a differential pressure and
15 * liquid film temperature data as a function of horizontal distance.
16 * This input LISTING simulates this test with TRAC-PP1/MOD2 for varying
17 * steam and liquid injection flow rates defined as follows:
18 *
19 *   time      mv (kg/m2s)
20 *   0         20

APPENDIX F

CODE-DATA COMPARISON FOR LEHIGH TEST 02/24/85-20 WITH NEWRFD=1

The calculation results for the reflood option newrfd=1, with and without grid spacers modeled, are presented in this appendix. The same set of plots that are presented in the main body of the report for the reflood option newrfd=3 are also presented for the reflood option newrfd=1. For reference purposes, the figure numbers for the two reflood options are listed below.

UPTF COLD-LEG TEST 8B INPUT LISTING

The corrected UPTF-8B input model requires a transient restart at 30 s to complete the calculation. The transient restart input listing starts on p. G-53.

9 Corrected UPTF Test 8B, By J. F. Lime, October 1999
10 The UPTF8B input model was corrected to model the vessel drain
11 mass flow more accurately. This was done by removing the vessel
12 drain valve and pressure boundary and replacing them with a
13 negative-flow Fill component that modeled the measured drain
14 mass flow. A slight adjustment in the downcomer volume fraction
15 was also made to match the measured downcomer liquid level at
16 initial conditions.

9 Corrected UPTF Test 8B, By J. F. Lime, October 1999
10 The UPTF8B input model was corrected to model the vessel drain
11 mass flow more accurately. This was done by removing the vessel
12 drain valve and pressure boundary and replacing them with a
13 negative-flow Fill component that modeled the measured drain
14 mass flow. A slight adjustment in the downcomer volume fraction
15 was also made to match the measured downcomer liquid level at
16 initial conditions.

10 bnl modified the deck on april 14,1988 for test 6 run131
11 uptf posttest no. 10b      february 2, 1988:brent boyack
12 used deck no. 1.2,revision from 1.0 based on:
13 minutes of frg mtg nov,84, vessel mods to lp and dc from plank
14 pump simulator volumes per hertlein, base steam per hertlein
15 valve 477 and break added to bcl primary drain
16 added the decay heat to control blks,changed hfg to 2.133e06
17 -----New comments, Norm Schnurr, 1/18/90 -----
18 This input deck was obtained from Henry Stumpf. It is a simulation of
19 UPTF Test 6 - Run 133 and was run with TRAC-PP1/MOD1 Vers. 14.3. I ran
20 it through GOCRVT3 to produce an input deck for MOD2, Vers. 4.8. It
21 was also necessary to change a few flow areas in the vessel and in some
22 TEES to satisfy restrictions imposed by newer versions of TRAC.

11 revised by j. f. lime, october 1999
12 (1) fill component mass flow modified to reflect measured
13     mass flow entering the lower plenum.
14 *
15 cctf run 14 core separate calculation
16 jaeri recommendation used for some heater rod material properties
17 vessel noding:
18     one radial rings
19     one azimuthal zones
20     twenty-four axial levels
21         one level in lower plenum
22         eighteen levels in core
23         five levels in upper plenum
24 system noding:

CODE-DATA COMPARISON FOR CCTF RUN 14 WITH NEWRFD=1

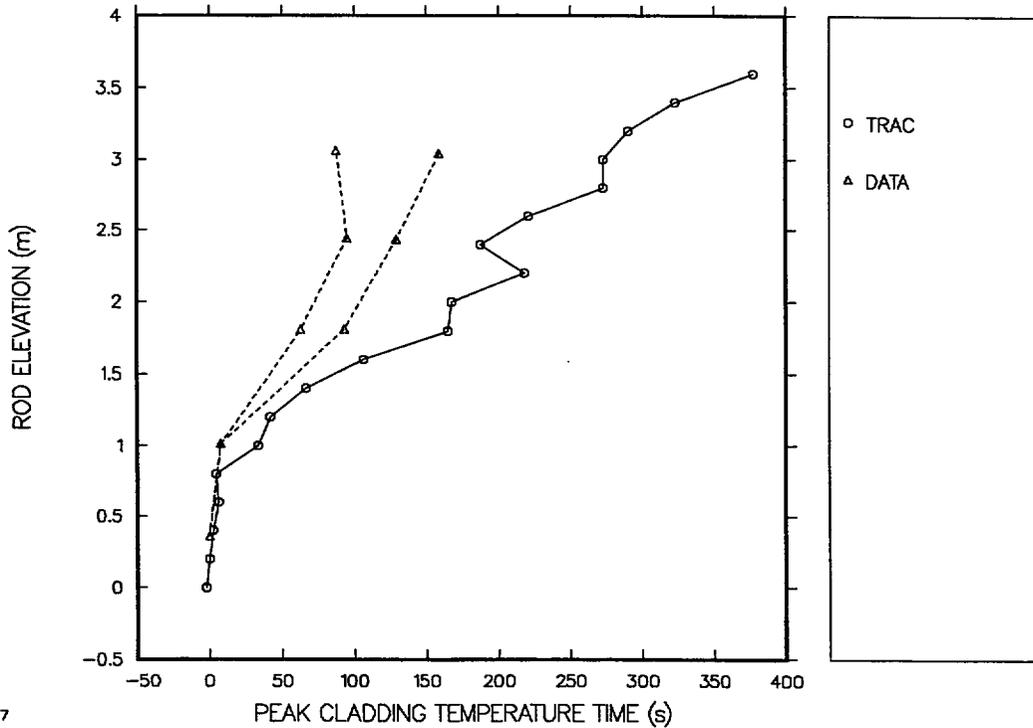

This appendix presents the calculation results for the reflood option newrfd=1, without and with grid spacers modeled. The same set of plots that is presented in the main body of the report for the reflood option newrfd=3 also is presented for the reflood option newrfd=1. For reference purposes, the figure numbers for the two reflood options are listed below.
