Subject: Oyster Creek Generating Station
Facility Operating License No. DPR-16
Docket No. 50-219
Withdrawal of Emergency Technical Specification Change Request No. 302

Reference: AmerGen Letter No. 2130-01-20169 to the USNRC dated August 6, 2001,
"Emergency Technical Specification Change Request No. 302"

AmerGen Energy Company, LLC (AmerGen) requested an emergency change to Oyster Creek Generating Station Technical Specification (TS) 3.4.C.3 in the referenced letter. AmerGen has successfully completed installation and testing of the replacement piping for emergency service water (ESW) loop II effectively bypassing a leaking section of underground pipe. All activities necessary to confirm operability of ESW loop II were completed at 0209 hours on August 9, 2001 prior to expiration of the 7-day outage time allowed by TS 3.4.C.3. As a result, the change requested in the referenced letter is hereby withdrawn. AmerGen appreciates the consideration given to the request by the NRC staff.

If any additional information is needed, please contact Paul Czaya at (609) 971-4139.

Very truly yours,

Ron J. DeGregorio For - 8/9/01
